

I want you to act as an English teacher and improver. I will give you an English article. This article is composed of several sentences that have already been segmented. You should polish the following sentence one on one so that the new sentence has the same meaning as the original one. You should only output the generate sentence. And the number of generated sentences should be equal to the number of original sentences.

The format of the sentence and the article is shown as follows:

<sentence> The original input sentence 1. </sentence>
<sentence> The original input sentence 2. </sentence>
<sentence> ... </sentence>...
<sentence> The original input sentence n. </sentence>

The format you generate should be:

<new sentence> The sentence you generate 1. </new sentence>
<new sentence> The sentence you generate 2. </new sentence>
<new sentence> ... </new sentence>
<new sentence> The sentence you generate n. </new sentence>

<sentence> Sentence here. </sentence> **prompt**
